

Help for your symptoms

What we do now and can do in the future

Help for your symptoms

OUR MISSION

We deliver a national digital channel

freely available 24/7 to anyone in England, guiding people to the right help for their symptoms

We connect patients directly to every kind of NHS service in their neighbourhood

whether they need A&E, a GP, a pharmacist or a dentist

We have the stable platform and capabilities to test and evolve with regions and trusts

as it is envisioned in the 10-Year Health Plan for England

WHAT WE ARE KNOWN FOR

We are leaders in offering online symptom assessments

that is clinically safe and easy for users to complete

We are the only digital service in the NHS that enables patients to refer themselves directly to all care settings

including primary, secondary, and urgent care

We are innovators in healthcare technology

- First NHS digital service to meet the GDS live service standard
- First online symptom assessment built to fully user-centred design principles, regularly iterated with usability testing, user interviews and feedback
- First cloud-based NHS service to access Personal Demographics Service (PDS)
- Built a coronavirus assessment service (before lockdowns) in less than four weeks
- Delivered first clinical webchats in the NHS in England
- Early adopter of next-generation NHS Booking and Referrals Standard (BaRS)
- Maintain our own scalable, cloud-based architecture that exceeds 99.9% availability and is independently certified as ecologically sustainable

CASE STUDY

Breast cancer diagnostic clinic self-referral (Somerset pilot)

SUMMARY

The Somerset breast diagnostic self-referral pilot introduced a new, digital-first pathway allowing eligible patients with breast symptoms to refer themselves directly to the breast clinic via 111 online. By removing the need for a GP appointment, the pilot aimed to speed up access to assessment, reduce pressure on primary care, and improve patient confidence and experience. Working closely with Somerset FT, we co-designed and clinically assured a safe, user-centred triage journey that routes appropriate patients straight to specialist services.

KEY WORDS

111 online • Self-referral • Somerset • Symptomatic triage • Saving GP time • Patient value

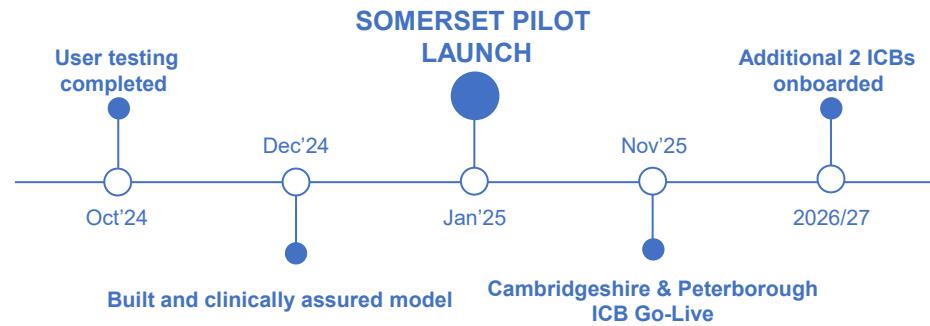

The challenges

- **GP appointment bottlenecks** can delay access to breast assessment.
- **High demand on GP services** means many patients wait days or weeks before initial review.
- **No alternative access route** for symptomatic patients needing timely reassurance or escalation.

Our methodology

- **User-centred design approach**, co-designed with clinicians, Trust operational teams and patients.
- **Test-and-learn pilot model**, with continuous refinement based on Trust feedback and live data.

Delivering our solution

NHS 111 online

Get an appointment at a breast clinic

You can refer yourself directly to a breast clinic without having to see your GP first. The clinic will check your symptoms to find out what might be causing them.

How to get an appointment

We will ask you for some personal details and send them to your local breast clinic. The breast clinic will then contact you to agree a date and time.

Tell us more about you

It's helpful for the breast clinic to have some information about you in advance.

This is to help with tests and investigations.

Try to answer the following few questions if you can.

Your request for an appointment has been sent

The clinic will contact you by 07 December 2025.

If they have not been in touch by then you must contact: 01823 792 871 or BreastEDT@somersetFT.nhs.uk.

You can contact the clinic on weekdays during working hours.

Our outcomes & impact

658	Self-referrals in 11 months
59%	Conversion rate to clinic
22	GP days saved
6.2%	Cancer diagnosis rate
77%	Uptake rate
3 minutes	Average time to complete pathway

CASE STUDY

Breast cancer diagnostic clinic self-referral (Somerset pilot)

DELIVERING SAFE, EFFECTIVE ACCESS

The pilot has demonstrated that a digital self-referral model can safely and effectively streamline access to breast diagnostic services. Early results show strong patient engagement, faster access to specialist assessment, and meaningful reductions in GP workload.

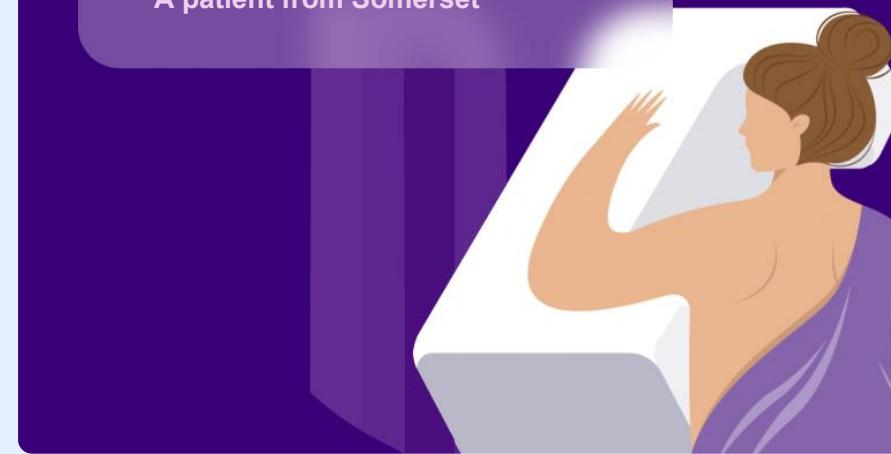

The pathway has proven operationally feasible, clinically safe and highly scalable , supporting wider ambitions to offer earlier, digital-first access to cancer diagnostics across the NHS.

KEY WORDS

111 online • Self-referral • Somerset • Symptomatic triage • Saving GP time • Patient value

“I think the referral scheme is amazing - especially as a mum - I don't like things taking more time than needed.”

A patient from Somerset

Putting users at the centre of our service and design

Our self-referral journey was designed with patients and clinicians.

The pathway uses intuitive questions, clear language and clinically safe logic.

Iterative user testing ensured the journey felt simple, reassuring and easy to complete, helping patients access specialist assessment faster and with more confidence.

Engaging locally, rolling out at scale

Building on the success of Somerset, we have now expanded the pathway to Cambridgeshire & Peterborough ICB, demonstrating that a digitally enabled self-referral model can be scaled safely and consistently across Trusts.

“This is a very exciting new self-referral pathway for people with concerning breast symptoms that will allow them to be assessed by the specialist team at the earliest opportunity. For most people referred, we will be able to reassure them that their symptoms are not related to breast cancer.”

Breast Consultant - Somerset Foundation Trust

CASE STUDY

Improving access to mental health services

SUMMARY

From 2023 Help for your symptoms has continually improved the support for users with a mental health concern. The team increased users' access to more services by allowing them to better report their symptoms. This created mental health journeys that can bypass urgent care and integrate directly with neighbourhood-level help, including links to digital tools and self-referral forms so more people receive support close to home or even online.

We continue to collaborate with policymakers and providers to make sure the best services are offered.

KEY WORDS

Mental health • Self referrals • Patient value

The challenges

- Short assessments meant patients could not fully report their mental health condition
- Therefore, many neighbourhood services could not be offered

Our methodology

- **Research:** Tested fuller assessments with users to prove patients would complete them accurately
- **Design:** Introduced new features to offer even more services based on users' GP registration
- **Collaboration:** Regular contact with local teams to ensure new services are available online

Delivering our solution

Patients can fully describe their needs and get non-urgent support

Introduced fuller mental health assessments

Users can access more services, based on their GP practice

New page designs help users who need non-urgent support see more service options

New outcome pages went live

Upcoming workstream will focus on enabling direct access to services like talking therapies

Increase self-referrals

The screenshots illustrate the user journey through the NHS 111 online service. Step 1 shows a list of symptoms for users to select. Step 2 shows a confirmation of symptoms. Step 3 is a 'Find your GP surgery' page. Step 4 is a 'Get help in the next few days' page, which includes a 'Contact your GP surgery' section and information about other services like talking therapies.

Our outcomes & impact

27,700

Urgent calls saved across 2024/25

900+

Services offered every month

198%

Increase in digital services presented to users since 2024
